

# TRAILERS MOD-BUG VANS

FOR THOSE WHO WANT  
TO CAMP OUT, NOT IN

FEATURING ▶

We use AZDEL Onboard® composite panels in place of lauan plywood during your RV's exterior and interior sidewall construction.

The panels are produced using a patented blend of polypropylene and fiberglass to create technologically superior walls that will help extend the life of your RV.

**time to "get off the ground"**

## How Do AZDEL ONBOARD® Composite Panels Improve Your RV's Construction & Performance?

Weight matters. Half the weight of lauan means easier towing, better fuel efficiency, and more available stow weight

Water & moisture resistant. No mold or mildew growth; no rot or decomposition from water; no warping or swelling!

Unaffected by freezing and warming cycles, helping to prevent delamination

The sound absorption by Azdel composite is 4.5X that of lauan for its average *and* peak. You are in for a quiet ride and rest!

Azdel composite was lab-tested per ASTM C518-2010 to offer an R-value of 4.65 at 980gsm, much better than that of wood.

No formaldehyde or other toxic chemicals; can breathe easily even for those with allergies or increased sensitivity.

Problems from wood/water, and resulting costs or downtime, are virtually eliminated, giving more time in your recreational vehicle.

The benefits of Azdel in your RV should provide peace of mind and offer a more positive overall ownership experience.

### ECO-FRIENDLY

Low environmental footprint; Composite production is sustainable; No deforestation occurs for its production; Production & support facilities all use renewable energy.
